

CryptoPassport

Data Processing Addendum

Decentralized Web3 Trust Platform

Document Type	Data Processing Addendum (DPA)
Version	1.0 - Legal Draft
Effective Date	April 1, 2026
Company	CryptoPassport
Infrastructure Model	AWS cloud infrastructure with decentralized, non-custodial Web3 interactions
Admin Control Model	No admin custody, no admin asset transfer, no admin override of wallet signatures or blockchain records

This document is the official CryptoPassport Data Processing Addendum and forms part of the applicable customer agreement. It becomes legally binding upon acceptance of the CryptoPassport Terms or use of the platform.

Prepared for CryptoPassport platform documentation and customer data protection disclosures.

Data Processing Addendum

Updated on: September 1, 2026

This Data Processing Addendum, including the Standard Contractual Clauses where applicable, collectively referred to as the "DPA" or "Addendum", is entered into by and between CryptoPassport ("Company", "CryptoPassport", "Data Importer", or "Processor") and the applicable customer, project owner, organization, or user ("Customer", "Data Exporter", or "Controller") using the CryptoPassport platform.

This DPA forms part of the applicable Terms of Service, subscription agreement, platform agreement, or any other agreement between CryptoPassport and the Customer governing the use of CryptoPassport services.

This DPA becomes legally binding upon the Customer acceptance of the Terms of Service, creation of an account, use of the platform, or execution of this Addendum.

CryptoPassport is designed as a decentralized, non-custodial Web3 trust platform. The Company does not custody private keys, does not control customer wallets, and does not have administrative power to transfer, freeze, or modify user crypto assets.

1. Definitions

Affiliate. Any entity that directly or indirectly controls, is controlled by, or is under common control with a party.

Customer Data. Any content, information, project data, public profile data, wallet-related data, metadata, or other materials submitted by or on behalf of the Customer through the CryptoPassport platform.

Personal Data. Any information relating to an identified or identifiable natural person, including names, email addresses, account identifiers, wallet addresses where legally considered personal data, IP addresses, device information, and usage data.

Project Data. Information submitted by a Customer about a crypto project, including project name, description, logo, links, smart contract addresses, networks, token details, social links, explorer links, badges, listings, verification information, and public trust signals.

Wallet Data. Public blockchain wallet addresses, chain identifiers, signature verification records, wallet connection metadata, and cryptographic verification records submitted or generated through the platform.

Services. The CryptoPassport Web3 trust platform, including project passport pages, wallet-based authentication, verified project profiles, trust badges, public project discovery, subscription management, and related services.

Sub-Processor. Any third-party service provider engaged by CryptoPassport to process Customer Data or Personal Data in connection with the Services.

Data Protection Laws. All applicable privacy and data protection laws, including the GDPR, UK GDPR, CCPA/CPRA, Swiss FADP, and other applicable laws.

2. Relationship of the Parties

The Customer may act as a controller or processor of Personal Data. CryptoPassport acts as a processor when it processes Customer Personal Data on behalf of the Customer for the purpose of providing the Services.

CryptoPassport may act as an independent controller for limited platform-related data, including account management, security monitoring, fraud prevention, billing, compliance, abuse prevention, and platform analytics.

The Customer is responsible for ensuring that any data submitted to CryptoPassport has been lawfully collected and may be lawfully processed through the Services.

CryptoPassport shall process Personal Data only in accordance with the Agreement, this DPA, documented Customer instructions, applicable law, security requirements, fraud prevention, abuse monitoring, compliance purposes, and the operation of the Services.

3. Nature and Purpose of Processing

CryptoPassport processes Customer Data to provide a Web3 trust and project verification platform. The platform enables crypto projects to publish project passport pages that organize public trust information, networks, contract addresses, explorer links, social links, verification signals, and related project disclosures.

- Creating and maintaining public project passport pages.
- Allowing crypto projects to publish verified project information.
- Displaying networks, smart contract addresses, explorer links, and social links.
- Enabling wallet connection and signature-based verification.
- Managing user accounts, project dashboards, subscription status, and support requests.
- Processing transaction hash metadata where crypto payment confirmation is used.
- Displaying verified badges and trust indicators.
- Preventing fraud, impersonation, spam, phishing, and abuse.
- Maintaining platform security, infrastructure availability, and operational continuity.

CryptoPassport does not take custody of user funds, tokens, wallets, private keys, or smart contracts. CryptoPassport admin personnel cannot transfer, freeze, move, modify, or control user crypto assets.

4. Categories of Data Processed

Category	Description
Account Data	Email address, username, login data, account settings, organization relationship, and user preferences.
Project Data	Project name, slug, description, logo, banner, websites, social links, badges, listings, public trust signals, and disclosures.
Wallet Data	Public wallet address, blockchain network, signature verification metadata, linked wallet status, and wallet connection metadata.
Blockchain Data	Public smart contract addresses, token networks, explorer references, transaction hashes, and on-chain status references.
Subscription Data	Plan type, payment status, renewal status, expiration date, and billing-related records.
Crypto Payment Data	Transaction hash, chain, public sending and receiving addresses, amount metadata, payment confirmation status, and related timestamps.

Category	Description
Usage Data	Pages visited, features used, actions performed, timestamps, device/browser metadata, and non-sensitive operational telemetry.
Security Data	Logs, failed access attempts, suspicious behavior signals, abuse reports, rate-limit information, and incident response records.
Support Data	Customer support messages, troubleshooting details, verification requests, attachments voluntarily provided, and communication history.

5. Categories of Data Subjects

The Personal Data processed may relate to CryptoPassport account owners, project founders, team members, project administrators, customer employees, contractors, collaborators, public visitors interacting with project passport pages, users connecting wallets to the platform, and individuals submitting support or verification requests.

6. Decentralized and Non-Custodial Model

CryptoPassport is designed as a non-custodial Web3 trust platform. This means that user-side wallet control and blockchain execution remain outside CryptoPassport administrative control.

- CryptoPassport does not hold user private keys or seed phrases.
- CryptoPassport does not custody tokens, NFTs, stablecoins, or other crypto assets.
- CryptoPassport does not initiate blockchain transfers on behalf of users.
- CryptoPassport does not control user wallets or wallet providers.
- CryptoPassport does not modify, reverse, or delete blockchain transactions.
- CryptoPassport does not seize, freeze, transfer, or escrow user funds.
- CryptoPassport does not override wallet signatures or cryptographic confirmations.
- CryptoPassport does not impersonate users, projects, or wallet owners.

Wallet-based actions require user-side confirmation and cryptographic signature where applicable. Any blockchain transaction is executed by the user directly through their own wallet provider.

7. Admin Limitations

CryptoPassport administrative access is limited to platform maintenance, support, abuse prevention, security monitoring, customer service, and compliance-related operations. Administrative personnel have no custody over user assets and no technical right to move user funds.

Admin Cannot	Description
Access private keys	Private keys and seed phrases are never collected by CryptoPassport and cannot be viewed by personnel.
Move crypto assets	Admins cannot transfer, withdraw, freeze, or seize user tokens, NFTs, or wallets.

Admin Cannot	Description
Approve on-chain actions	Blockchain actions require user wallet confirmation and cannot be signed by CryptoPassport on behalf of the user.
Bypass signatures	Sensitive Web3 actions requiring wallet signature cannot be overridden by admin controls.
Manipulate on-chain records	Public blockchain records are maintained by decentralized networks outside CryptoPassport control.
Transfer project ownership without authorization	Ownership transfer requires appropriate verification and cannot be performed casually by admin intervention.

Where admin workflows exist, they are limited to off-chain platform records such as support review, abuse moderation, public badge status, payment confirmation metadata, public content moderation, or account-level operational support.

8. Security Measures

CryptoPassport maintains administrative, technical, and organizational measures designed to protect Customer Data and Personal Data. The security program is designed around least privilege, cryptographic user confirmation, AWS infrastructure controls, monitoring, and separation between platform records and user-controlled blockchain assets.

- Authentication for dashboard access.
- Wallet signature verification for sensitive Web3 actions.
- Role-based access controls and least-privilege access principles.
- Encryption in transit using HTTPS/TLS.
- Encryption at rest where supported by AWS services and platform components.
- Secure password handling and secret management.
- Logging and monitoring of suspicious activity.
- Protection against unauthorized admin access.
- AWS infrastructure monitoring, backups, and availability controls.
- Secure deployment workflows and version-controlled releases.
- Vulnerability review, remediation, and secure code practices.
- Vendor and sub-processor security review where applicable.

9. Infrastructure and Sub-Processors

CryptoPassport operates using AWS cloud infrastructure and selected Web3 infrastructure providers. Sub-processors are engaged only where necessary to provide the Services, protect the platform, verify public blockchain references, deliver notifications, and maintain availability.

Provider / Category	Purpose
AWS	Cloud infrastructure, hosting, storage, compute, managed database services, backups, logging, and operational security.
Cloudflare	DNS, CDN, traffic protection, WAF, domain protection, rate limiting, and edge security.
GitHub	Source code management, version control, issue tracking, and deployment workflow integration.
Wallet Providers	MetaMask, WalletConnect-compatible wallets, Phantom, Solflare, and other wallet interfaces used by users for connection and signature confirmation.
Blockchain RPC Providers	Reading public blockchain data, confirming public transaction status, and querying public network information.
Blockchain Explorers	Displaying or linking to public transaction, smart contract, and network data.
Email Provider	Transactional email, account communication, platform notifications, and support-related communication.
Analytics / Monitoring Tools	Performance monitoring, security monitoring, operational logs, error reporting, and abuse detection.

CryptoPassport may update its list of sub-processors from time to time. CryptoPassport remains responsible for using commercially reasonable efforts to ensure that sub-processors processing Personal Data are subject to appropriate contractual and security obligations.

10. International Data Transfers

CryptoPassport may process or transfer Personal Data outside the European Economic Area, United Kingdom, Switzerland, or the Customer country of residence where necessary to provide the Services.

Where required by applicable Data Protection Laws, CryptoPassport will rely on appropriate transfer mechanisms, including Standard Contractual Clauses, the UK International Data Transfer Addendum, adequacy decisions, Data Privacy Framework participation where applicable, and equivalent lawful transfer safeguards.

CryptoPassport will take commercially reasonable steps to ensure that Personal Data remains protected during international transfers and that transfers are limited to what is necessary for the operation, security, and delivery of the Services.

11. Confidentiality

CryptoPassport shall ensure that personnel authorized to process Personal Data are subject to confidentiality obligations. Access to Customer Data is limited to personnel or service providers who require access for legitimate business, operational, security, compliance, or support purposes.

Personnel are required to follow internal security, confidentiality, access control, and acceptable use policies. Unauthorized access, disclosure, or use of Customer Data is prohibited.

12. Data Subject Rights

Where required by applicable Data Protection Laws, CryptoPassport will assist the Customer in responding to lawful requests from Data Subjects. Such requests may include access, correction, deletion, portability, restriction of processing, objection to processing, and withdrawal of consent where applicable.

Where CryptoPassport receives a Data Subject request relating to Customer-controlled data, CryptoPassport may direct the Data Subject to contact the Customer directly. CryptoPassport will provide reasonable assistance where the Customer cannot respond without CryptoPassport support and where such assistance is technically and legally possible.

13. Data Retention and Deletion

CryptoPassport retains Personal Data only for as long as necessary to provide the Services, comply with legal obligations, resolve disputes, prevent abuse, maintain security, enforce agreements, support audit trails, and preserve platform integrity.

Upon termination of the Customer account, CryptoPassport may delete or anonymize Customer Data within a reasonable period, unless retention is required by law, compliance, security, fraud prevention, dispute resolution, or legitimate operational purposes.

Public blockchain data cannot be deleted by CryptoPassport because blockchain records are maintained by decentralized networks outside CryptoPassport control. Public project passport pages may be removed or unpublished from the CryptoPassport platform, but on-chain data and third-party indexed data may remain publicly available outside CryptoPassport.

14. Personal Data Breach

In the event of a confirmed Personal Data Breach affecting Customer Personal Data, CryptoPassport shall notify the Customer without undue delay where required by applicable law. CryptoPassport shall provide reasonable information available at the time, including the nature of the breach, categories of data affected, likely impact where known, mitigation steps taken or planned, and recommended customer actions where applicable.

CryptoPassport notification of a breach shall not be interpreted as an admission of fault or liability. CryptoPassport shall take reasonable steps to investigate, contain, mitigate, and remediate confirmed incidents within its reasonable control.

15. Customer Responsibilities

The Customer remains responsible for lawful use of the Services and for maintaining the security of its own accounts, wallets, team permissions, project representations, and blockchain interactions.

- Ensuring it has legal rights to submit data to CryptoPassport.
- Obtaining necessary consents from team members, users, or representatives.
- Maintaining accurate project information and public disclosures.
- Protecting wallet private keys, seed phrases, devices, browser extensions, and wallet providers.
- Verifying blockchain transactions before signing.
- Managing account access and team roles internally.
- Notifying CryptoPassport of suspected unauthorized access or impersonation.

- Ensuring public project data does not violate laws, intellectual property rights, privacy rights, or third-party rights.

CryptoPassport is not responsible for losses caused by compromised customer wallets, phishing, incorrect blockchain transactions, smart contract vulnerabilities controlled by the Customer, inaccurate data submitted by the Customer, or third-party wallet provider failures outside CryptoPassport control.

16. Audit and Compliance Assistance

Upon reasonable written request, CryptoPassport may provide information necessary to demonstrate compliance with this DPA, subject to confidentiality, security, commercial sensitivity, and platform integrity restrictions.

Such information may include security documentation, infrastructure overview, access control summaries, audit reports where available, penetration test summaries where available, compliance statements, sub-processor information, and reasonable written responses to security questionnaires.

Any audit must be reasonable, limited in scope, not disruptive to CryptoPassport operations, and subject to appropriate confidentiality obligations. Customer shall not be granted access to systems, source code, secrets, production infrastructure, or other customer data.

17. Company as Independent Controller

CryptoPassport acts as an independent controller for certain data necessary to operate and secure the platform, including account administration, billing and subscription management, fraud prevention, security monitoring, abuse prevention, legal compliance, platform analytics, service improvement, and communication with users.

Such processing is governed by CryptoPassport Privacy Policy, applicable law, and the legitimate operational needs of the platform.

18. No Custody and No Financial Control

CryptoPassport is a software and trust-layer platform. CryptoPassport does not provide custody services, investment advice, financial brokerage, asset management, centralized exchange services, token escrow services, legal validation of crypto projects, or guaranteed investment protection.

The platform provides project transparency tools, public information organization, wallet-based verification, and trust signals. Users remain solely responsible for their investment decisions and blockchain interactions.

19. Conflict

In the event of conflict between this DPA and the Agreement, the following order of precedence shall apply: (1) Standard Contractual Clauses where applicable; (2) this DPA; (3) the Terms of Service or main Agreement; (4) the Privacy Policy; and (5) other platform documentation.

20. Signatures

This DPA becomes binding upon Customer acceptance of the Terms of Service, creation of an account, use of the CryptoPassport platform, or execution of this Addendum.

Exhibit A - Details of Processing

Subject Matter

The processing of Personal Data in connection with the provision of CryptoPassport services, including project passport creation, public trust profiles, wallet verification, account management, subscription management, support, and platform security.

Duration

For the duration of the Customer use of the Services and for any additional period required by law, security, fraud prevention, dispute resolution, audit trails, compliance, or legitimate operational purposes.

Nature of Processing

Collection, storage, organization, structuring, display, transmission, verification, security monitoring, access management, support, deletion, anonymization, and audit logging of Customer Data and Personal Data.

Purpose of Processing

To provide CryptoPassport services, secure the platform, verify ownership or authenticity signals, publish project information, prevent abuse, support Customer account management, process subscription status, and maintain platform availability.

Categories of Personal Data

- Account identifiers and email addresses.
- Public wallet addresses and chain identifiers.
- Signature verification metadata.
- IP addresses and device/browser metadata.
- Project owner and team member information submitted by Customer.
- Public profile information, support communications, and transaction hash metadata.

Sensitive Data

CryptoPassport does not intentionally require Customers to submit sensitive Personal Data. Customers should not submit sensitive Personal Data unless necessary and legally permitted.

Exhibit B - List of Parties

Party	Details
Data Exporter	Customer, as identified in the Agreement, account registration, subscription record, or project owner account. Role: Controller or Processor. Contact: As provided by Customer.
Data Importer	CryptoPassport. Role: Processor for Customer-controlled data and independent Controller for limited platform operations. Contact: privacy@cryptopassport.io . Service: Web3 project passport and trust-layer platform.

Exhibit C - Technical and Organizational Security Measures

1. Security Governance

CryptoPassport maintains internal security practices designed to protect Customer Data against unauthorized access, misuse, disclosure, alteration, and loss. Security governance includes security policies and procedures, access control standards, infrastructure monitoring, incident response procedures, vendor review, secure development practices, and periodic review of security controls.

2. Access Control

CryptoPassport applies access controls to prevent unauthorized access. Controls include user authentication, wallet-based verification, secure session management, admin access limitation, least-privilege principles, restricted access to production systems, logging of sensitive actions, and periodic access review where applicable.

3. Encryption

CryptoPassport applies encryption measures where appropriate. Controls include HTTPS/TLS encryption in transit, encryption at rest through AWS-supported infrastructure, encrypted credentials where applicable, secure handling of API keys and secrets, and secure storage of authentication-related data.

4. Infrastructure Security

CryptoPassport uses AWS infrastructure for hosting, storage, compute, database, backup, and operational security. Infrastructure controls may include network segmentation, firewall and security group rules, access key restrictions, monitoring and logging, automated backup processes, availability and redundancy controls, infrastructure-level encryption, and secure deployment workflows.

5. Application Security

CryptoPassport applies secure development and application controls. Controls include code version control, review before production deployment, validation of user input, protection against unauthorized access, secure API design, protection against privilege escalation, wallet signature verification for sensitive actions, and monitoring for suspicious behavior.

6. Monitoring and Incident Response

CryptoPassport monitors platform activity for security, abuse, and reliability purposes. Monitoring may include login activity, failed authentication attempts, suspicious wallet activity, unusual project updates, abuse reports, system

errors, infrastructure alerts, and admin action logs. Confirmed incidents are reviewed, documented, and remediated according to severity.

7. Data Deletion and Portability

CryptoPassport allows Customers to request deletion or export of certain account and project data, subject to legal, technical, security, and blockchain-related limitations. On-chain data is not controlled by CryptoPassport and cannot be deleted from decentralized networks.

8. Availability and Continuity

CryptoPassport is designed to maintain service availability through AWS infrastructure, monitoring, backups, and operational recovery procedures. Controls may include redundant infrastructure where applicable, backup processes, recovery planning, infrastructure monitoring, incident escalation, and deployment rollback where possible.
